

Craig Bed shown with optional foam riser block under mattress

Craig Bed closed and latched

Modular Rehab Treatment Bed

The Pro-Care Craig Bed is a functional, reliable solution for facilitating the safe treatment of Closed Head Injury, Cerebral Palsy, and Huntington patients. It is composed of a foam mattress and four padded walls that connect to form a safe padded enclosure. As an alternative to being restrained, the patient may be placed in this padded environment with reduced likelihood of injury. The 6" thick heavy duty foam mattress is covered in a tough, nylon reinforced hospital grade vinyl fabric. It is fluid proof, stain & static resistant, antimicrobial, durable and easy to clean. The reversible mattress rests directly on the floor, or may be placed on an optional foam riser block. The side walls are padded with foam bolsters and covered with heavy duty hospital grade fabric. The walls connect with webbing straps and quick-release buckles. The exterior is baked enamel and wipes clean with standard cleaning solutions.

Quick & Easy Access

Access to the interior of the bed is quick and easy from either of two opposite corners. Simply squeeze the quick release buckles and the walls swing open. To close again, loosen the adjustable straps to allow some slack, then snap the buckles back together and cinch up till the walls are again snug against the mattress. Entry may be made from either of two opposite corners. All hardware is reversible so that the entry can be changed from left to right side to facilitate your room layout.

Easy Handling

The CR120 Craig Bed is designed for easy transport and storage. Each wall section rolls on heavy duty, non-marring, lock-able swivel casters. The two wall sections may be latched together for ease of handling.

Optional Riser Blocks

Covered foam riser blocks are available to raise the mattress 4" off the ground to allow better visibility and easier access to juveniles from outside the enclosure. Caution! When using a riser block, care should be taken that the mattress is not raised so high as to allow the patient to tumble over the wall.

Note!

The use of a riser block is not recommended for active patients over 6'2" tall, due to the possible potential for these patients to accidentally tumble over the top of the restraining walls when standing.

Flammability

Mattress meets Federal Open-Flame Flammability Standard CPSC 16/CFR/Part1633, and Cigarette Standard Part 1632. All materials used in the manufacture of this mattress meet California Flammability Standard T.B. #117.
